DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-12, 17-22 drawn to a composition and method for the treatment of hepatitis B, C, and D, classified in class 514, subclass 42+.
 - II. Claims 13-16, drawn to a composition and method for the treatment of HIV and AIDS, classified in class 514, subclass 42+.
 - III. Claims 23-25, drawn to a method for the treatment of a proliferative disorder, classified in class 514, subclass 42+.
 - IV. Claims 26 and 27, drawn to a process for preparing a 5' pyrimidine nucleoside, classified in class 536, subclass 28.1.
 - V. Claims 28 and 29, drawn to a process for preparing a 5' pyrimidine nucleoside, classified in class 536, subclass 28.1.
 - VI. Claims 30 and 31, drawn to a process for preparing a 5' purine nucleoside, classified in class 536, subclass 27.21.
 - VII. Claim 32, drawn to a process for preparing a nucleoside triphosphates, classified in class 536, subclass 27.1+.

The inventions are distinct, each from the other because of the following reasons:

1. Inventions I-III and IV-VII are related as process of making and product made.

The inventions are distinct if either or both of the following can be shown: (1) that the

Art Unit: 1623

process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case Groups IV-VII represent 4 distinct processes for the manufacture of the claimed nucleoside product(s). Should applicant elect one of Groups I-III, one of Groups IV-VII will be examined as well.

2. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case Groups I– III represent 3 materially different processes of use of the nucleoside compounds, respectively hepatitis treatment, HIV treatment and the treatment of proliferative diseases.

2. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper. A search of the distinct and divergent inventions would impose an undue burden upon an examiner assigned this application.

3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II-VII, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
